

■■ VAJRA AI THREAT INTELLIGENCE PLATFORM

Ransomware Intelligence, Enterprise Use Cases & C-Suite Benefits Report

1. Executive Summary

This strategic report presents the operational capabilities and business ROI of the **VAJRA AI Threat Intelligence Platform**. Built specifically for modern enterprise SecOps and C-Suite leadership, VAJRA unifies 9 real-time telemetry sources into an automated perimeter defense engine. By continuously auditing domain security scores (0–100), SSL/TLS certificate chains, unpatched NIST NVD vulnerabilities, and active Ransomware-as-a-Service (RaaS) victim announcements, VAJRA shifts enterprise security from reactive incident cleanup to proactive threat prevention.

2. The Escalating Ransomware Crisis & Live Intelligence

Modern ransomware syndicates operate as highly organized RaaS enterprises executing **double-extortion attacks**—exfiltrating sensitive corporate IP prior to locking infrastructure. Average downtime costs now exceed **\$1.85 Million** per incident, excluding reputational loss and compliance fines.

Threat Group	Target Sector	Attack TTP	Severity
LockBit 3.0	Aviation & Logistics	Credential theft & RDP exploit	HIGH
BlackCat / ALPHV	Healthcare & Finance	Data exfiltration + double extortion	CRITICAL
Cl0p	Managed Service Providers	Zero-day vulnerability exploitation	CRITICAL
Akira	Commercial Real Estate	VPN gateway compromise	MEDIUM

3. Real-World Enterprise Use Cases

🚩 ■ Use Case 1: Aviation & Transportation Security (e.g., IndiGo Airlines)

- **Challenge:** Passenger booking portals, flight APIs, and subdomains process millions of transactions daily, making them prime targets for ransomware and credential stuffing.
- **VAJRA Solution:** Continuous parallel inspection of primary domains ('goindigo.in') auditing SSL certificate validity, active AbuseIPDB scores, and open NVD CVEs.
- **Outcome:** Detects untrusted certificates, expired subdomains, and zero-day vulnerabilities before cybercriminals launch operational disruption attacks.

■ Use Case 2: SOC Operations & Executive Briefing Automation

- **Challenge:** SOC analysts lose valuable hours during incidents manually querying disparate threat databases and assembling executive briefings.

- **VAJRA Solution:** 5-Tab Deep Domain Inspection (Overview, Threats, CVEs, SSL Audit, DNS) paired with one-click automated PDF export engine.
- **Outcome:** **90% reduction in investigation time** and instant publication of board-ready executive summaries.

4. Strategic Benefits for CISO & Executive Leadership

1. **Proactive Threat Mitigation:** Neutralizes perimeter risks (expired TLS certificates, high AbuseIPDB scores, unpatched CVEs) before ransomware deployment.
2. **Consolidated 9-Feed Telemetry:** Ingests NVD, AlienVault OTX, Ransomware.live, URLScan, VirusTotal, AbuseIPDB, WHOIS, DNS, and TLS sockets into one platform.
3. **Boardroom & C-Suite Transparency:** Standardized 0–100 Security Risk Scores provide clear, defensible metrics for executive board meetings.
4. **Supply Chain Security:** Continuous third-party vendor domain auditing prevents vendor-side lateral breaches.
